## Eight LARS Systems Delivered to the Kuwait Coast Guard

G+1 0 Tweet Share Like Share 0

Posted by Eric Haun

Ending 2016, TBV Marine Systems, part of High-Tech Solutions & Design B.V., has finished the commissioning for eight FRC/RHIB Launch and Recovery systems (LARS) that have been delivered for four new vessels ordered by the Kuwait Coast Guard.

For this project, the LARS was designed to carry a craft with a length of nearly nine meters, with a maximum weight of six tons. For each vessel, the stern ramp was designed to carry two systems, which were both powered by one hydraulic power unit.
